Service Data Management

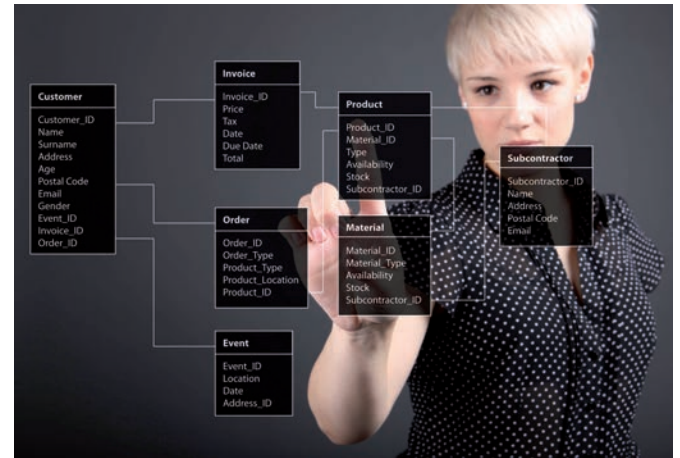

Your situation, your objective and your challenge

Globalisation of your business requires uniform definitions and standards for your data. Responsibilities for data maintenance need to be reviewed. Also data quality must be improved and measured. For the implementation of important business strategies an encompassing and enterprise-wide concept for the management of your data is needed.

What does the service include?

Data Management includes the following tasks:

- Analysis of the drivers for data management und evaluation of need for action.
- Collection of status quo for data management and comparison with Best Practices.
- Description of objectives and assessment of expected benefits.
- Description of the elements of the to-be data management, e.g.
 - Organisation and Responsibilities
 - Data Management Processes
 - Data Quality Criteria
- Analysis and description of data management impacts on IT architecture and applications.
- Support in selecting appropriate IT solutions.
