IT together

Service ERP Template

Your situation, your objective and your challenge

You use a variety of different ERP systems where business processes are implemented differently. For the globalization of your business you want to standardize, harmonize and improve your processes and reduce the amount of your IT solutions. For this you are planning the setup of a global ERP Template which shall be used as a basis for your business and shall be rolled out to the different companies of your group. You need support by a partner who has a comprehensive experience with all aspects of such a transformation program.

What does the service include?

The service ERP Template includes the planning of the complete ERP Template program. All topics mentioned below are addressed and further experts for these topics must be involved when detailing the plan. The service is most effective when used in the beginning of such a program as the topics are highly interrelated to each other. But a company which has already started with such a program can also benefit from this service, e.g. a part of a quality assurance task.

Details of the service:

- Analysis of drivers and definition of the template targets, including benefit assessment.
- Creation of an outline plan for the template setup and the rollouts.
- Inspection of single work packages, their interrelations and support of the concept creations for the following work packages:
